

Notes for first BECS meeting

1. Introductory information and exercises were preformed.
2. Do a storyboard and simple program. Have whole group discuss what is a storyboard and why it is useful. Have them break up into small groups (maybe 2 groups of 3-4) and do a storyboard. Make sure they know to keep it fairly simple: few objects doing simple motions. Have them show each other the storyboard and describe. Then have groups implement in Alice. They may need some help with this but let them do as much as they can. Make it clear it is OK to experiment and see. If they find it too hard then OK to simplify and if finish fast then can make more complex. Have each group show the final result.
